Projection Optics

The Orbiter Projection Optics provide unparalleled precision in every detail allowing for crisp projection of a light spot, as well as immaculate gobo projection and precise shutter cuts. The field of light is entirely even and without color aberration. The projection has no visible hot spot or drop to the edge and the depth of field is outstanding. Both optics have a standard iris slot. The four manually adjustable shutter blades of the Projection Optics 25° and 35° produce a beam where any shutter blade cut, and the beam’s edge are simultaneously in sharp focus. Orbiter’s QLM allows the optics to be mounted safely and quickly onto the Orbiter but still enabling a 90° rotation. It is perfectly suited for theaters, cinematic applications, as well as broadcast studios or live productions.
