SKYLINK[®]

Go wireless with SkyLink

ARRI and Innovative Dimmers have teamed up to create SkyLink: a two-part system that allows for wireless DMX and RDM communication to all capable devices including Orbiter, SkyPanel, L-Series, and more. The SkyLink Receiver and the SkyLink Base Station use LumenRadio for DMX/RDM communication and a WiFi chip in the Base Station allows for direct control from a DMX control application on a tablet or computer. Setting up a control network has never been easier. Say goodbye to DMX cables with SkyLink.

Perfect for Orbiter, SkyPanel, and L-Series

The SkyLink Receiver plugs directly into the DMX port on the back of any ARRI LED fixture, powered by either a USB port on the fixture or an extra power supply. The Orbiter and SkyPanel S360 already have wireless DMX built in and work seamlessly with the SkyLink products. With excellent compatibility, SkyLink works with all ARRI LED fixtures and more.
