SkyPanel Lite, Standard and Heavy Diffusion panels have been developed to work perfectly with the SkyPanel-C models. Standard Diffusion (105° HPA) panel offers medium diffusion and produces optimal light output and beam quality. The Lite Diffusion (107° HPA) is less diffuse and therefore allows more light to pass through, while the Heavy Diffusion (114° HPA) is more diffuse and allows less light through, but provides a softer beam quality.

- Produces homogeneous beam of light with great output
- Plastic diffusion material and rugged metal frame

Also available as Kits, see page 67.
This intensifier panel for SkyPanel* increases light output by up to 50% while maintaining a soft, even beam of light. The increase in output is achieved by capturing some of the light going off to the side and refocusing it in a more forward direction. Light output in the center is thereby intensified and yet the quality of the light is retained.

- Increased output up to 50%
- Maintains homogeneous, soft beam of light
- 74° Half Peak Angle

*The intensifier does not work with -RP models of the SkyPanel.
Remote Phosphor Panels

Remote phosphor panels for the SkyPanel-RP models are available in six color temperature versions with excellent color rendition. There is also a chroma green version for lighting green screens available.

- Excellent Color Rendition
- Produces a homogeneous and soft beam of light
