A. Introduction

The AEM-1 is widely popular on sets and with V1.1 G we are happy to bring a highly requested feature to the unit. Output monitoring enables the user to monitor the audio as it is routed and recorded in camera.

For more information on the AEM-1, please visit [the AEM-1 website](#)

Update Recommendation

AEM-1 V1.1 G can be installed on all previously shipped AEM-1s, and we recommend updating from any previous version.

Overview of New Features of V1.1G

- **AEM-1 output monitoring**

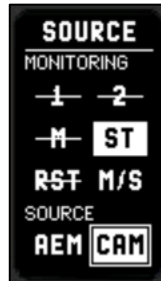

Software Compatibility

- Please note that for all features to be available the ALEXA 35 has to be updated to SUP 1.3.0 or later. The AEM-1 will still work with any previous SUP.

B. New Features of V1.1G

AEM-1 output monitoring

The AEM-1 V1.1G adds output monitoring – the ability to monitor the inputs as they are routed and recorded in the system. ALEXA 35 SUP 1.3.0 in conjunction with AEM-1 SUP 1.1G now offers that feature. To enable it set the monitoring source to 'CAM'.

C. Update Procedure

Where to download the new Software Update Package (SUP)

You can find the Software Update Package in the [Software Update Packages download section](#). A SUP can be installed on the camera by using a USB stick as described in detail below.

AEM-1 Update Procedure

The AEM-1 software is updated from a USB memory stick.

The update can be started through the menu of the AEM-1.

- After the download, please place the update file in the root folder of the USB Stick.
- Connect the USB Stick to the AEM-1.
- Open the AEM-1 menu via the MENU button
- Go to SETUP > UPDATE
- Select Yes to start the firmware update
