For projects using spherical lenses for a 16:9 or 1.85:1 deliverable with a 4K Cine resolution (4096 horizontal pixels). Also useful for spherical 16:9 or 1.85:1 projects with a UHD deliverable that want a little extra area for resizing, repositioning, stabilizing, or tracking in post. The sensor area is close to the traditional spherical Super 35 film format for compatibility with a wide range of Super 35 lenses.

For maximum frame rates with Sensor Overdrive on and off. This is sometimes used to have extra padding around an HD deliverable. Close to the traditional Super 16 film format and therefore most Super 16 lenses cover.

¹ Please note that in Sensor Overdrive mode, Exposure Index = 800 to 6400, maximum shutter = 340°, Enhanced Sensitivity is disabled and the camera has a dynamic range of 11 stops.
