Please note:
Due to the height of the Fujifilm ETERNA 55, rods mounted via the Compact Bridge Plates CBP-5/6 and the BPA-6 are positioned approximately 10 mm below the standard heights defined for 15 mm LWS and 15/19 mm studio rod standards. To achieve the standard 15 mm LWS height, the Base Plate for Eterna 55 used together with the LWS-7 provides full compatibility. The 19 mm studio standard height is not supported with this camera configuration.
